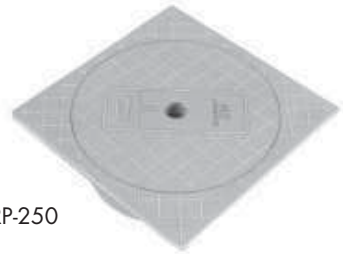
## tapas de registro



## Tapas de registro para la **toma de tierra**

• El punto de unión de la toma de tierra y la línea de enlace se conoce como punto de puesta a tierra, y deberá ser un elemento fácilmente accesible para poder comprobar, periódicamente, la resistencia de difusión de la toma de tierra y la continuidad eléctrica de la línea de enlace.

• Es aquí, donde la instalación de una tapa o arqueta de registro de la toma de tierra tiene la finalidad concreta e importante, y no se debiera colocar ningún sistema de tierra sin elemento tan valioso, de cara a una correcta conservación.

# Tapas de registro **multiuso**

• Una nueva línea de producto que se une a nuestra gama ya ampliamente aceptada en el campo eléctrico.
• Tapas para registros sobre obras de albañilería, fabricadas en polyester reforzado con fibra de vidrio, aptas para soportar el paso de vehículos ligeros, idóneas para interiores o exteriores, con junta de neopreno entre las dos partes evitando el filtraje de líquidos al interior. De muy fácil manipulación por su reducido peso. Concebidas especialmente para ambientes húmedos y/o agresivos donde el polyester, como producto de futuro, ofrece las mejores prestaciones, obteniéndose mejores resultados a largo plazo, al ser eliminados completamente los problemas de oxidación y deterioro que se producen en las clásicas tapas metálicas.
• Particularmente indicadas para proteger y cerrar herméticamente diversos tipos de maniobras, ya sean de agua, gas, teléfono, electricidad, etc.
• Posibilidad de suministro con diferentes rotulaciones como: ALUMBRADO PÚBLICO, SANEAMIENTO, TELÉFONOS, GAS, SEMÁFOROS, RIEGO, etc.

### AENA, ADIF, MOVISTAR, IBERDROLA, ENEL, EMASA

• Nuestras arquetas están homologadas y autorizadas por empresas como AENA en España que las utiliza en toda su red de Aeropuertos. Se utiliza para contener los transformadores de las balizas.

• Teléfonica MOVISTAR las usa para las telecomunicaciones, su modelo está formado por una arqueta AM-400 junto con un marco y tapa de poliéster.

• Estamos incluidos en las especifícaciones técnicas de ENDESA para energía.

• ADIF, la compañía de trenes las utiliza también en sus telecomunicaciones, usando varios modelos.

• RED ELECTRICA DE ESPAÑA para energía.

• EMASA para contadores de agua.

Para evitar la creación, en la zona próxima al borde del terraplén, de una zona débil, de compactación de ciente, por la que el agua de escorrentía pueda ir socavando el terraplén e impedir que la canaleta quede desprotegida lateralmente, recomendamos rellenar los laterales con hormigón en masa de resistencia H-100 o el de nido por la asistencia técnica de la dirección de obra, que garantice la estabilidad de esta zona.

## Equipos de proteccion grupo inversor

Equipos previstos para una Tensión nominal de la instalación de 1000Vdc y fusibles NH-0 de 50A para la protección de cada entrada. La intensidad del interruptor seccionador puede variar en base a la tensión de la instalación y a la intensidad del fusible colocado para la protección de cada entrada . La intensidad máxima de fusible admisible por cada base, dependerá del tamaño de la misma:

NH-0 Intensidad máxima fusible Imax(A) 160A. (NO INCLUIDOS)
NH-3 Intensidad máxima fusible Imax(A) 400A. (NO INCLUIDOS)
